

List of Current Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1 - 7 (Cancelled).

8. (Currently Amended) apparatus for determining and/or monitoring a process variable of a medium, comprising:

a membrane

an oscillatable unit secured to said membrane;

a sending/receiving unit, which excites said oscillatable unit to oscillate and which receives oscillations of said oscillatable unit

a control/evaluation unit, which, on the basis of the oscillations of said oscillatable unit, monitors and/or determines the process variable, wherein:

said sending/receiving unit comprises a disk-shaped, piezoelectric element; and

said disk-shaped, piezoelectric element has at least two segments, which are essentially polarized oppositely to one another; and

at least exactly two electrodes of opposite polarity are applied to the side of said disk-shaped, piezoelectric element facing away from said membrane.

Claim 9 (Cancelled).

10. (Previously presented) The apparatus as claimed in claim 8, wherein:
said electrodes have essentially the same shape.

11. (Previously presented) The apparatus as claimed in claim 10,
wherein:

said electrodes have the shape of semicircular segments.

12. (Previously presented) The apparatus as claimed in claim 8,
wherein:

 said electrodes are so structured and arranged that they annularly surround
 themselves.

13. (Previously presented) The apparatus as claimed in claim 8,
wherein:

 said piezoelectric element is provided on the side facing said membrane
 at least partially with a conductive coating.

14. (Previously presented) The apparatus as claimed in claim 18,
wherein:

 the side facing said membrane is connected electrically conductively with
 ground.
